🛠️ Step-by-Step Setup Guide

- **Extract the Zip File**

  - Locate your downloaded `.zip` file in your Downloads folder.
  - Right-click the `.zip` file and select **Extract All** (or *Unzip* / *Extract Here*).

- **Open in VS Code**

  - Open Visual Studio Code.
  - Go to **File > Open Folder** and select your extracted project folder.

- **Configure Environment Variables**

  - Inside the `backend` folder, find and open the `.env` file
  - Locate the line for your Inception API key (e.g., `INCEPTION_API_KEY=your_key_here`) and replace it with your actual Inception key.
  - Save the `.env file`

- **Start the Backend**

  - Right-click the `backend` folder in VS Code and choose **Open in Integrated Terminal**.
  - Run `npm install` and wait for it to finish.
  - Run `npm run dev` to start the backend server.

- **Start the Frontend**

  - Right-click the `frontend` folder in VS Code and choose **Open in Integrated Terminal**.
  - Run `npm install` and wait for it to finish.
  - Run `npm run dev` to start the frontend server.

- **Access the App -** Open Browser

  - Go to the URL: **`http://localhost:5173/`**
